TITLE: How to buy hosting with the best provider in India?

—---

DomainRacer provides hosting services all over the world with several hosting packages that have different plans.

Each comes with features that help websites store lots of data and handle the traffic more than enough so that our websites won't go down at any time. We are offering USA based vps server to boasts a 30% faster startup time for your website to launch quickly and efficiently.

If I want to transfer from any other hosting package or plan to another hosting package or plan. *DedicatedCore* does it pretty much quicker and safer without the website facing any downtime or loss of data while transferring.

Also, when going through this process they assured me that before sending new domain details websites are loading fine before and after transferring the websites from their side and only they send.

So I don't have to check manually again whether the part has been done correctly and do my work then.

How to choose the hosting package?

As said earlier they have four different packages that too at a low and cheap price for Indian clients. When I checked with other hosting providers even, they have more packages but that doesn't fit all websites only a few would choose. But *DomainRacer* India made it simple with WordPress, Business, Dedicated, and VPS hosting packages that also come with free domain if it goes for an annual plan. If you want to reduce latency risks in Uk then you can choose the forex server for safer trading practices.

Business Hosting: For businesses with more storage space requirement

WordPress Hosting: Simply for easy-to-manage WordPress-based websites

Dedicated Server: To those who need to take full root control of the server

VPS Hosting: To those who want to have a virtually dedicated space.

How to buy a hosting Package?

Business Hosting:

Place the order of the package with any plan and give the domain name. You can either register with them, transfer your domain, or use an existing registration.

Then choose the billing cycle and server location. That's pretty simple. The 25K+ websites are live efficiently with DomainRacer vps server hosting which offers low cost and fast loading time in Singapore.

WordPress Hosting:

Everything will be the same for WordPress hosting as business hosting except for choosing a server but for this, I got WordPress pre-installed while placing the order and received both cPanel and WordPress login credentials via mail which gives me relief. Step into modern JavaScript development download and install Node.js and NPM on Windows to unlock backend and frontend possibilities.

Conclusion:

To buy hosting with the best provider in India you need to know about your requirements that make it easier to choose the provider.

In India, you may find many hosting providers so you need to go with the provider that offers the services according to your requirement. To help you with the search here are a couple of the hosting providers: **DedicatedCore & DomainRacer**

They both provide several hosting services which include the LMS, VPS, Shared, Dedicated server, and DPS.
